Building Retrofit Program Improves Learning Environment

Morris Public High Schools, Morris, Ill., recently signed a 10-year agreement with Minneapolis-based *Honeywell Home and Building Control* to increase comfort and energy efficiency of its school facilities and improve the learning environment for students.

The \$1.55 million project includes an additional \$31,000, 10-year maintenance agreement. Renovations will include a complete lighting retrofit, installation of Honeywell EXCEL 5000 management systems, two new boilers, direct digital controls, a steam trap replacement, pool cover and auditorium air conditioning as well as an AirWatch weather station.

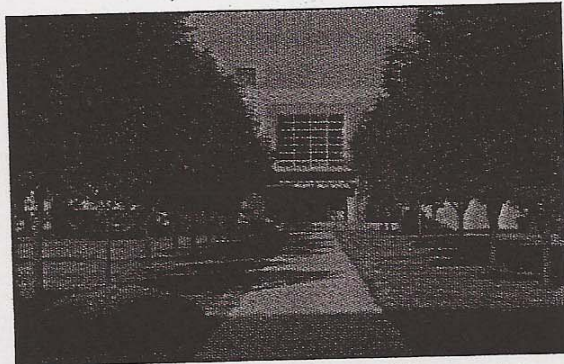

This agreement, according to Honeywell Account

Manager Laura McFarland, takes the company's commitment to improving the learning environment a step further. "Traditionally, we've focused on delivering a safe, secure and comfortable learning environment through our technology. Now we're also focusing on

contributing to student achievement through a variety of product solutions that connect to the classroom, leading with the AirWatch weather station," she explains.

The AirWatch system includes Internet-based interactive software and an interdisciplinary curriculum that allow teachers to integrate real-time, real-world weather data from AirWatch into hands-on mathematics and science. Steve Fannin, Morris Public High School District superintendent of schools, calls the AirWatch system "an extra incentive that will help kids learn and teachers teach."

The performance contract will save the school \$60,000 per year in energy and operational savings. For FREE info. Circle 296

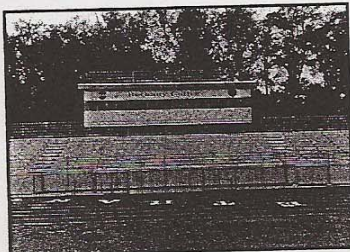

Included in the energy partnership is a 10-year maintenance agreement for Morris Community High School.

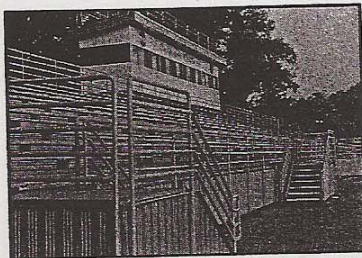

Sturdisteel

"Quality from the Ground Up"

Quality is a tradition at Sturdisteel. From our Permanent Grandstands to our Portable Bleachers, every detail of a Sturdisteel product is durable and reliable.

Modern techniques in manufacturing and engineering give all Sturdisteel products the strength to provide extra years of service, yet are designed with comfort and ease of use in mind.

Sturdisteel. Quality from the ground up. Competitively priced.
